CHOOSING THE LENGTH OF CIRCULAR NEEDLE TO BEST SUIT YOUR PROJECT

Circular needles are measured from tip to tip, and so the length of the needle includes both needle points and the connecting tube. This is useful to know if you use interchangeable needles as the cables are sold in various lengths, but the actual length of cable is that measurement minus the length of the needle points.

The key things to remember when choosing the length is you cannot use a needle that is longer than the diameter of the tube of knitting (if knitting in the round) is too short to accommodate the number of stitches you have

*The upper limit of stitches given is the absolute maximum you can fit on a needle. Circular needles can hold up to 3 times the length of the cable only i.e. needle length minus the length of both the tips. However with bigger projects knitted flat (such as a blanket) the bulk of the knitted fabric you are producing also needs to be taken into account, so you would want to allow more length for this and opt for a longer needle.
